

Some key IEA points

Roberta Quadrelli

Head, Energy Balances, Prices, Emissions and Efficiency

Energy Data Centre, IEA

+33 1 4057 6633

<http://www.iea.org/statistics/>

1) Energy stats work at national level is essential for sound decision making,

2) IEA is proud of all such new efforts made at national level, and glad of cooperation with ESCWA and all its members in data collection and exchange. Thanks to this work, data will improve at the national and international level.

3) End-use surveys are extremely important to obtain good demand side data. This is not only useful to formulate comprehensive energy balances, but also to monitor energy efficiency progress at sectoral level

- 4) IEA would be glad to include the three new national practices for transport surveys within our database on country practices. <http://www.iea.org/eeindicatorsmanual/>
- 5) The same database may be of use to other members to study practices of data collection across end use sectors.
- 6) IEA would be glad to disseminate our manuals for energy efficiency indicators, covering the four end use sectors, which propose internationally harmonised methodologies to analyse trends of end use energy consumption.
