

Dissemination and Utilization of Population and Housing Census

products :

Emerging trends and lessons learned

Ahmad Hussein ,Ph.D.

Consultant

ahmad.hussein@gmail.com

Outline

- **What is Dissemination ?**
- **Importance of census data**
- **Census Dissemination Strategy**
- **Population and housing census products**
- **Online dissemination**
- **Geography products**
- **Visualization of census data**
- **Census microdata files**
- **Metadata**
- **Utilization of census data**
- **Conclusion and recommendations**

1. What is dissemination ?

- Dissemination is a Process, not a Product
- Dissemination is an ongoing process subject to change and evolution
- Census Dissemination is not just generating new data
- Dissemination means getting the right data and information to the right people at the right time in a right format , so they can take the right decisions
- Timing is crucial !

What is dissemination ? (cont.)

- *Dissemination is the release of data obtained from a population and housing census to users through various media.*
- *For each data release there is also a need to effectively communicate the data to data users and a requirement to make known the availability of the release.*

2. Importance of census data

- Census data are an important input in policy planning and academic analysis in many fields.
- Census data are very important input in monitoring and evaluation of the SDGs 2030
- In health service provision,
- Educational resource allocation,
- Design of utilities and infrastructure,
- For electoral planning are some applications where government agencies require spatially referenced small area population statistics.
- Commercial users employ such data for marketing applications and location-based decisions.
- For statistical applications

3. *Dissemination Strategy*

Census dissemination is a customer-centric approach

Principles

- Responding to user needs when developing and disseminating data and metadata;
- increasing access to information by disseminating directly and through other organizations; and
- providing maximum access to information of broad interest, free of charge,
- Innovative in supplying the needs of the censuses users on time and in different formats

Strategy vision and good practices

- *To Achieve the widest possible dissemination and use of census data by better utilising the Web and associated technologies, and by adopting consistent data and metadata formats and standards.*
- *The dissemination practices of other countries can inspire developments in our own techniques. Sites from, Finland, Canada, UK, US , Sweden, Poland , and Australian Bureau of Statistics are acknowledged to be some of the best in disseminating census data.*

Strategy vision and good practices (cont.)

- Involve the end-users to design the census product sharing process
- *Create interesting stories and relate your findings to those with similar problems*

Census Strategy : Situation Analysis

1. Assessment of the present strategy based on performance.

2. Strengths, Weaknesses, Opportunities, and Threats (SWOT) analysis.

3. Assessment of competitive strength and identification of competitive advantage.

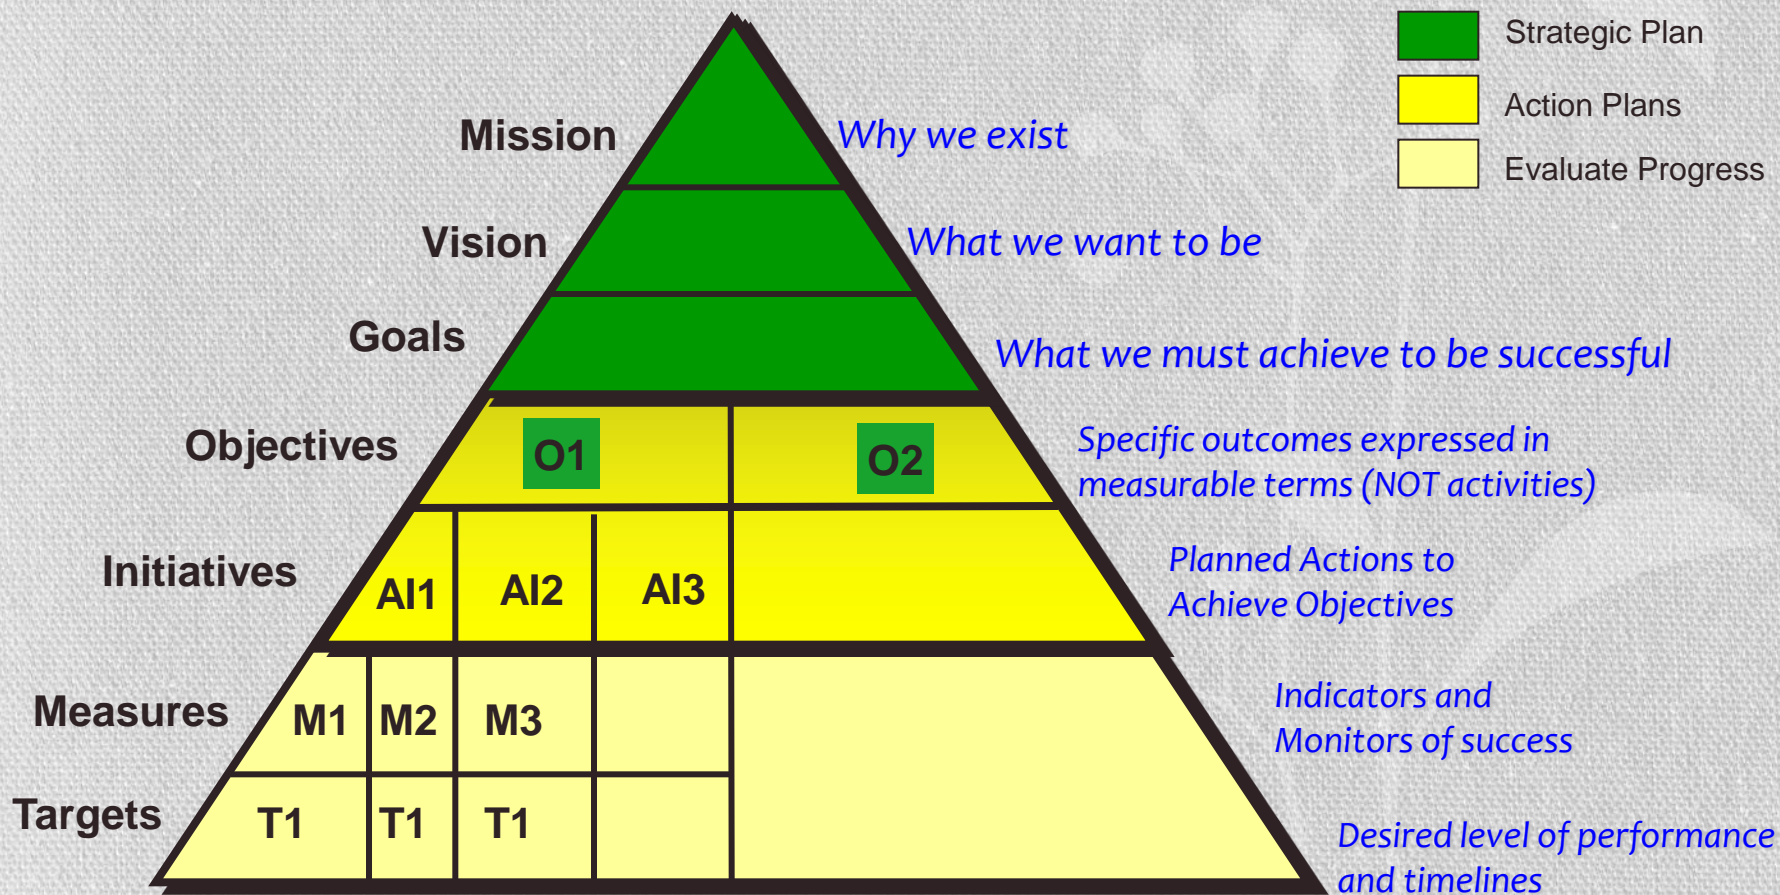

4. Conclusions concerning competitive position.

5. Determination of the strategic issues and problems that need to be addressed through the strategic planning process.

Major Components of the Dissemination Strategic Plan

Components

4. Broad Census products

- Preliminary results
- Final results
- Basic reports
- Thematic reports
- population profiles
- Quantitative Analytical reports
- Qualitative studies to understand the reaction of the users with the dissemination plan

Census products (cont.)

- *Educational materials*
- *Census at school*

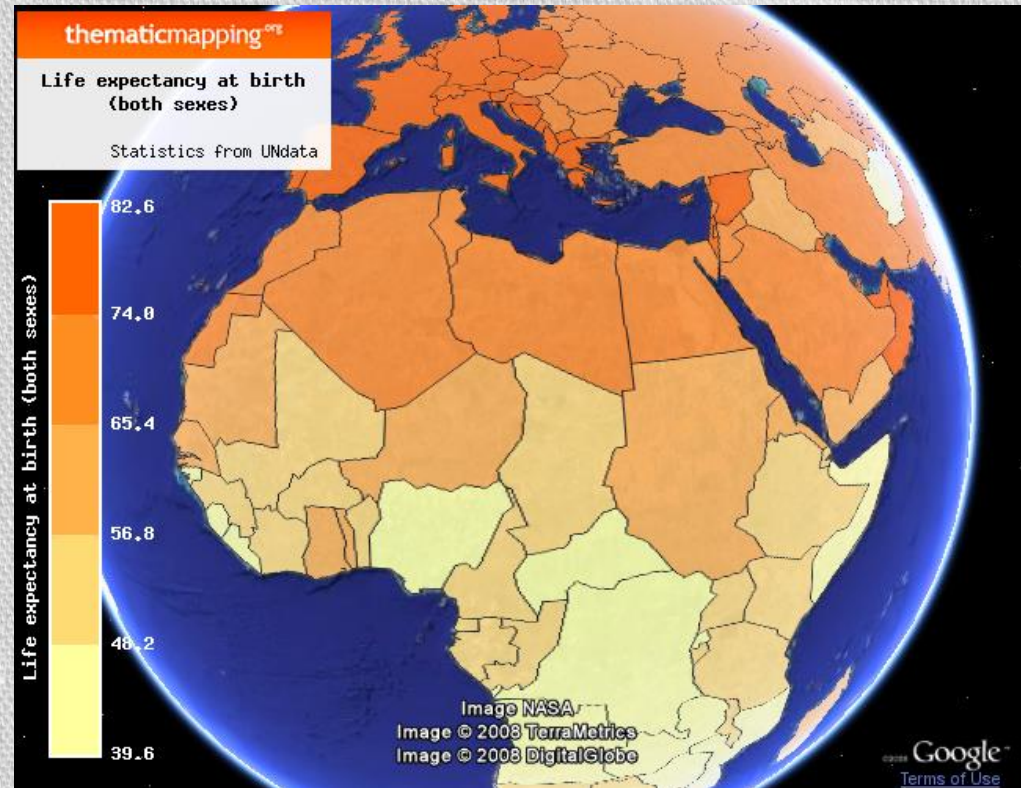

1. <http://ww2.amstat.org/CensusAtSchool/pdfs/CAS.Project.2011.pdf>
2. <http://www.censusatschool.ca/>

- *Social Media*
- *Personal contacts*
- *Mashups*

What is a Mashup?

- A web application that combines data from more than one source into a single integrated tool
- an example is the use of data from Google Maps to add location information to statistical data, thereby creating a new and distinct web service that was not originally provided by either source

United Nations Regional Seminar on Census
Data Dissemination and Spatial Analysis

Bangkok, Thailand, 5-8 October, 2010

Census products : Promotional reports and activities (cont.)

- **Website**
- **Posters**
- **Press releases**
- **Mobile phone application**
- **Media campaign**
- **Brochures, flyers and blogs**

Commissioned Outputs

A Plan for Products and Resources 2016

- *Communications materials on completing the census and recruitment for census jobs, including:*
 - *Web graphics*
 - *Videos*
 - *Posters*
 - *Brochures*
 - *Fact sheets*
 - *Articles*
 - *Social media posts*

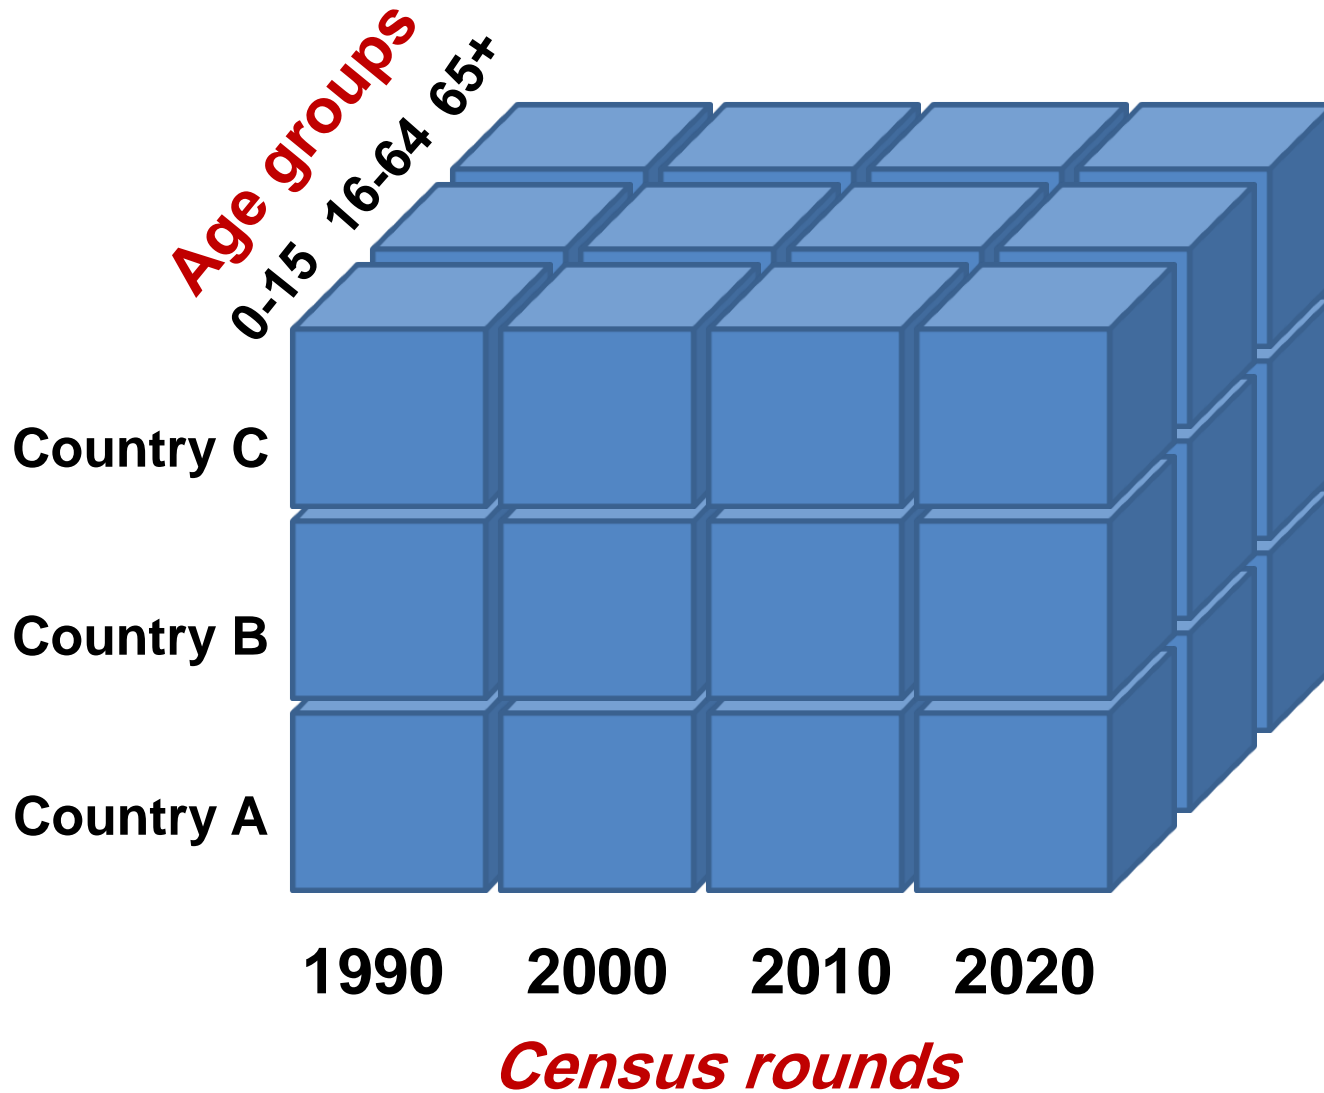

5. Developing Interactive –OLAP data warehouse

- **Data Warehouse**

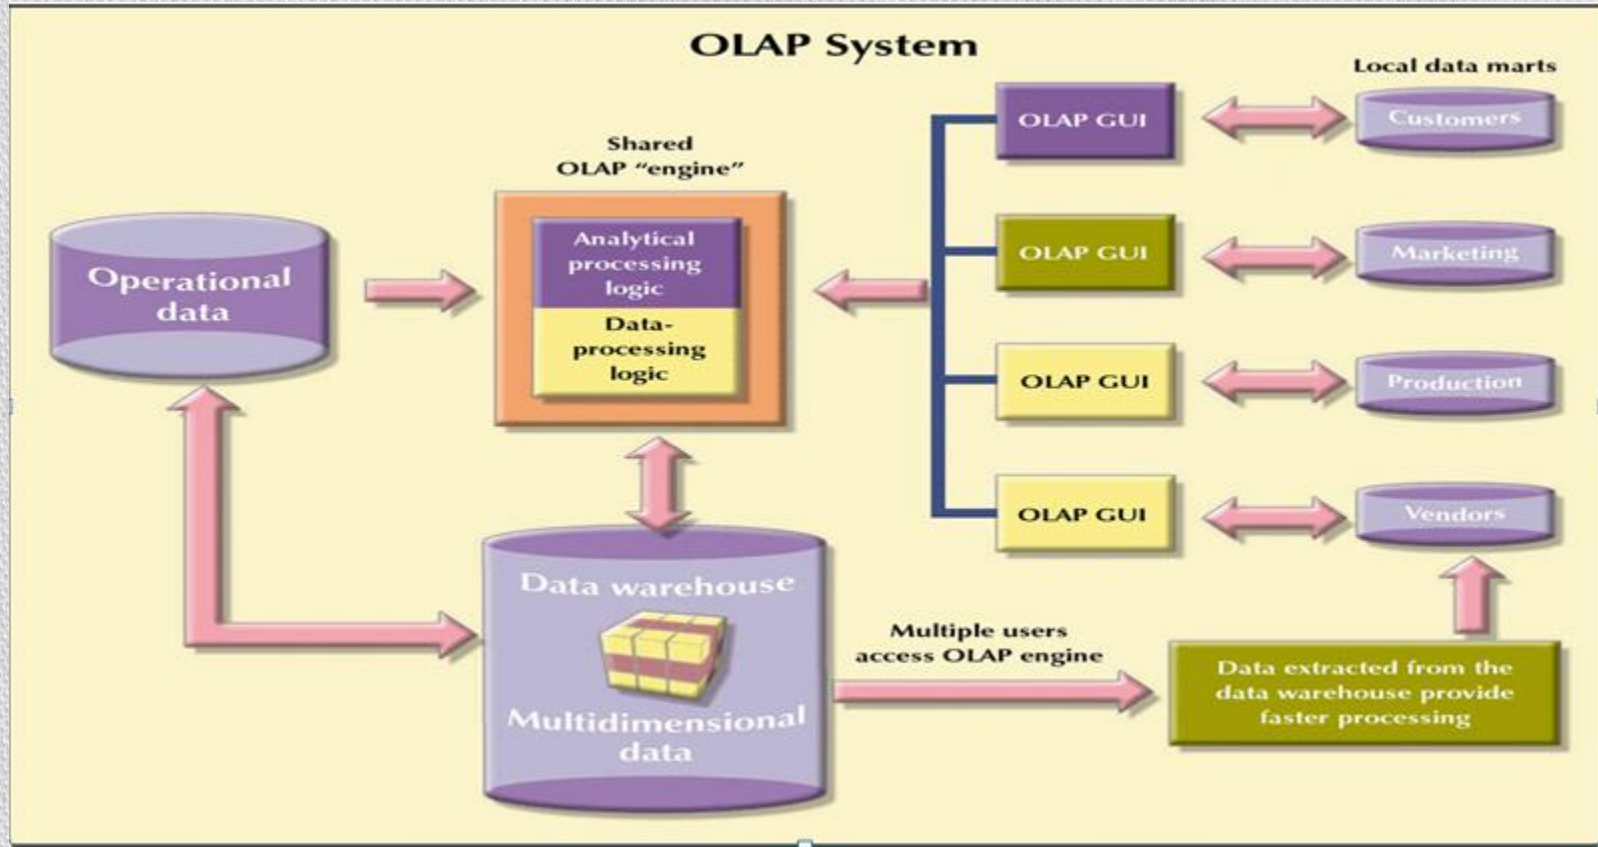

Data from different data sources is stored in a relational database for end use analysis. Data organization is in the form of summarized, aggregated, non volatile and subject oriented patterns. It Supports the analysis of data but does not support data of online analysis.

- **Online Analytical Processing** : The ability of OLAP cubes to facilitate multifaceted data analysis in response to complex business queries, will see them maintain some degree of usefulness, as businesses accumulate increasingly large data volumes of increasing complexity. Because OLAP cubes can be made up of more than three dimensions (hypercube), in-depth analysis is enabled, allowing users to gain comprehensive and valuable business insights

*Interactive Databases : Online Analysis Processing
Data Cube (Hypercube)*

OLAP Server With Local Mini Data Marts

European Census Hub (Eurostat)

- Dissemination of the 2011 Census data and housing censuses in the European Union Member States.
- agreed hypercubes (tables)
- The new tool "Census Hub" constructed for data dissemination is based on the concept of data sharing, where National Statistical Institutes (NSIs) provide access to their data according to standard processes
- It should be noted that the census data disseminated here are not microdata; they are aggregated data structured according to the tables agreed with Member States and defined in the legal implementing rules for the census.
- <https://ec.europa.eu/CensusHub2/query.do?step=selectHyperCube&qhc=false>

 [Build Your Census Tables](#)

[Build Your Census Tables](#)

WEB ACCESSIBILITY CONFORMANCE

You can now build your own census table through the Interactive Data Dissemination Service ([IDDS](#)) anytime and anywhere.

Simply choose the required [statistics and classifications](#) in the [IDDS](#) system and a statistical table containing the results of the 2011 Population Census (11C) will be displayed automatically.

You can further customise your census table by adding or hiding the subtotal and percentage figures, revising the classification grouping, filtering out the unnecessary classification items or comparing the 11C figures with the similar results of the 2006 Population By-census and 2001 Population Census. Charting of the output statistical table is also supported.

Don't forget to export or print your census tables and charts before you quit !

Demonstration

List of Statistics and Classifications

Frequently Asked

What is CensusInfo ?

- *A software based on DevInfo platform with new functionalities*
- *Developed in partnership with UNICEF and UNFPA*
- *Officially launched in February 2009 at the 40th session of the Statistical Commission*
- *Made available on-line for free*
- *Powerful tool for organizing, storing and presenting census data in a structured way*
- *Data shared easily and quickly with national and international users, on CD-ROM and on the web*
- *Supports user-defined tables and indicators*
- *Customizable by country*

6. Geography products

- *Reference maps : show the boundaries, names and codes of standard geographic areas on a background of selected road and water features.*
- *Thematic maps: show the spatial distribution of one or more specific data themes for standard geographic areas*
- *Static atlas*
- *Dynamic atlas*

Geography products (cont.)

- *static census atlas*
- *Dynamic census atlases: Publishing of a digital map and database together with mapping software can allow users to produce custom maps of census indicators. It normally includes digital boundary files at a lower resolution than the full census database to allow fast drawing and low disk usage*

England and Wales population up

Latest news | At a glance | Optimum population? | **Census animation**

England and Wales now has a population of 56.1 million people, an increase of 3.7 million since 2001. The graphic below, from the ONS Data Visualisation Centre, tells the story of how this population has grown, through periods of war, disease, depression and immigration.

100 years of census

England and Wales 1911-2011

On 29 April 2011, Prince William and Catherine Middleton are married at Westminster Abbey, London. They become Duke and Duchess of Cambridge.

- Monarch: Queen Elizabeth II
- Prime Minister: David Cameron

Census portals

The screenshot displays the Geostatistics Portal interface. At the top left is the logo and the text "GEOSTATISTICS PORTAL". Below it are "MENU" and "TOOLS" tabs. A navigation sidebar on the left contains icons for back, forward, home, search, and other functions. The main content area features a "Thematic Map" panel with a "Data Bank" dropdown set to "Local Data Bank" and a "Themes filter" input field. A list of thematic categories is visible, including "AGRICULTURAL CENSUS", "AGRICULTURE, FORESTRY AND HUNTING", "CULTURE AND ART", "ENTITIES OF THE ECONOMY ENTERED", "ENVIRONMENTAL PROTECTION", "EUROPEAN FUNDS", "FINANCES OF ENTERPRISES", "FUEL, ENERGY AND MATERIALS MARKET", "HEALTH CARE AND SOCIAL WELFARE", "HIGHER EDUCATION", "HOUSING ECONOMY AND MUNICIPAL INFRASTRUCTURE", "INDUSTRY AND CONSTRUCTION", "INVESTMENTS AND FIXED ASSETS", "LABOUR MARKET", "LOCAL GOVERNMENT", "NATIONAL CENSUS", "NON-PROFIT SECTOR", "ORGANIZATION OF THE STATE AND JUSTICE", "PHYSICAL EDUCATION, SPORT AND RECREATION", "POPULATION", "PRE-SCHOOL EDUCATION", "PRICES", and "PRIMARY, LOWER SECONDARY, POST-PRIMARY AND UPPER GENERAL SECONDARY EDUCATION".

The background is a map of Poland with regional labels: pomorskie, zachodniopomorskie, pomorskie, wamińsko-mazurskie, północny, północno-zachodni, lubuskie, łódzkie, świętokrzyskie, wschodni, małopolskie, podkarpackie, and lubelskie. A "Modules" window is open, showing two options: "Geostatistical Data Browser" (with a 2D map icon) and "Kilometre grid presentations" (with a 3D map icon). At the bottom right, there is a scale bar (0, 50, 100 km) and a coordinate display: "Coordinates X: 0.00 Y: 0.00 N: 0°0'0\" E: 0°0'0\" Active layer Gminy Selected objects 0".

8. Dissemination of census microdata files

- **The Demand** : The demand for microdata is growing and becoming more diverse. This diversity is visible in a broadening of the audience but also in the way in which the microdata are being used
- **The supply** : The benefits of microdata dissemination are well known and broadly accepted. Sharing microdata fosters diversity of research, increases transparency and accountability, and can mitigate duplication of data collection work and increase the quality of data through feedback received from data users.
- **Authorize the release** of microdata files for public use when the release substantially enhances the analytic value of the data collected

Data extract

Key principles and organizational best practices for disseminating microdata files

- *Openness*
- *Transparency*
- *Legal conformity and protection of privacy*
- *Protection of intellectual property*
- *Interoperability*
- *Quality*
- *Security*
- *Accountability*

Technical Standards and best practices of microdata files documentation

- **Documentation**, Compliance with international metadata standards is crucial for ensuring exchangeability of metadata and for promoting collaboration or coordination in the development of microdata curation tools
- **Cataloguing**. Publishing detailed metadata in on-line searchable catalogs is important to make data discoverable .Compliance with the DDI standard makes it considerably easier. Open source DDI compliant cataloging applications already exist such as the open source National Data Archive (NADA) developed by the IHSN or DataVerse developed by Harvard University.
- **Anonymization of the data**

Standards of microdata files documentation

- **Dissemination** : Typically, five levels of accessibility are considered: open access (no restriction), direct access or Public Use Files (some restrictions on use, but no screening Files, or Licensed Files), availability only in an enclave, and no access authorized.
- **Preservation**: Organizations which disseminate microdata and the related metadata are also often responsible for their long term preservation. Preserving digital content is not a trivial exercise. Procedures and infrastructures must be put in place to protect data against hardware and software obsolescence migration of datasets to new media and format.

9. Metadata

What is census metadata?

- *Census metadata are information that describe census statistical data. Census metadata may also describe processes that collect, or produce census data; such metadata are also called process data. “Census metadata” may also be used for descriptions of resources and tools that are instrumental in census production, e.g., statistical classifications and standards, registers, and statistical methods, procedures, and software*
- *Metadata is not confined to writing on paper. Maps, graphs, computer screen shots, computer programs, compiled code, scanned documents, and data bases are all components of metadata.*

Data About Data

Metadata is the data, or information, about the data.

It is the:

of your census

Types of metadata

- **Geographical metadata** - information on geographical hierarchies used in the Census and the Output Area Production System (OAPS). This type of metadata will be the responsibility of the Output production team.
- **Technical metadata** - information of a technical nature, such as how to load and run products and the 'platforms' needed.
- **Product metadata** - information aimed at assisting users get what they want from Census outputs in the most efficient way..
- **Census metadata** - information on statistical aspects of the Census, providing a background information on the results, clarifying the meaning and context.

Metadata Products:

- *Electronic Census Metadata Warehouse (CMW), should be created and populated*
- *The CMW would be populated with Census metadata in a modular way, over time and updated as information becomes available.*
- *The CMW would form a core product, and be used as the source of material for stand-alone products such as the Census Quality Report.*

Metadata Aids Data Discovery

Metadata enables users to search their own:

**Data
Management
System**

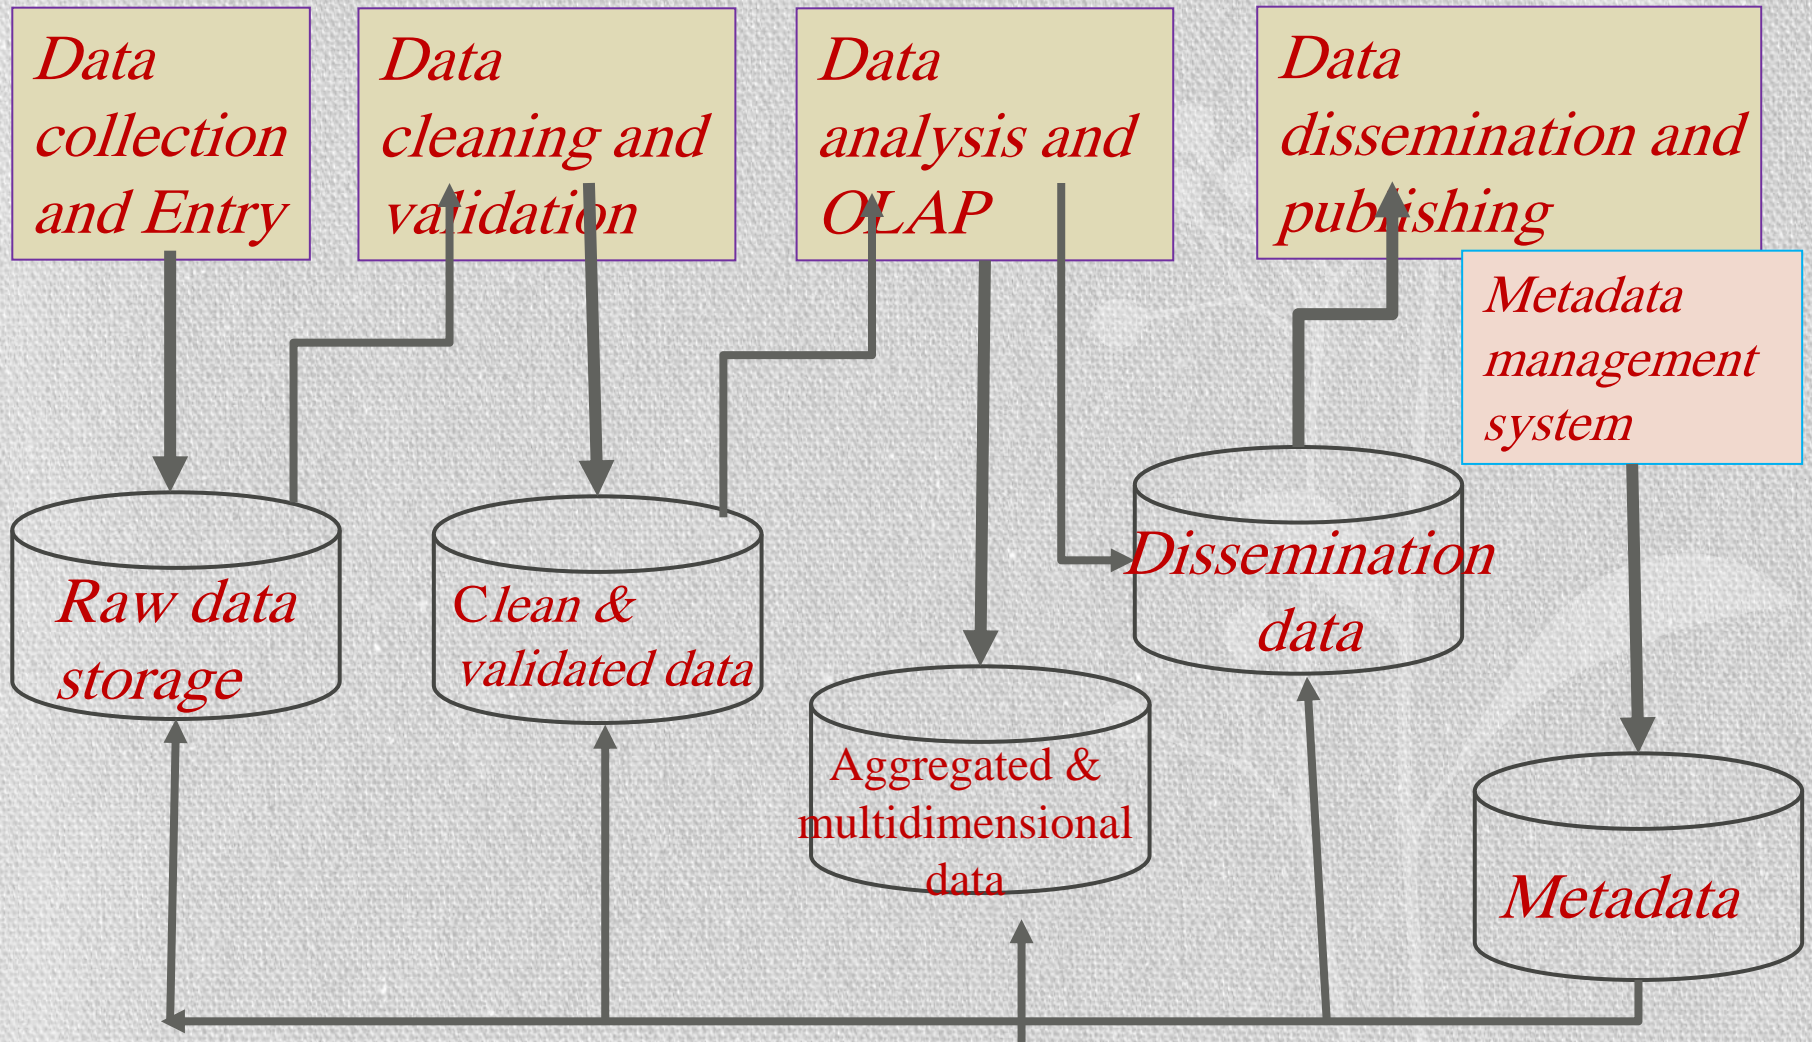

- Geographic Information System (GIS)
- Database Management System (DBMS)
- other...

Metadata enables user to search external:

**Data
Distribution
Systems**

- Data Catalogs
- Data Servers
- Web-mapping Applications
- other...

Schematic of Processing System

10. Utilization of census data

- *Reliable, accessible and timely population data are essential for development planning and assessing progress toward the achievement of the new Sustainable Development Agenda,*
- *Reliable information about the size, growth, distribution and characteristics of populations is crucial not only to guide the development policy supporting the implementation of the SDGs, but also to assess progress towards their achievement*

Uses of population censuses

- *Uses for policymaking, planning and administrative purposes: The fundamental purpose of the population census is to provide the facts essential to national policy formulation*
- *planning and administration: Information on the size, distribution and characteristics of a country's population is essential for describing and assessing its economic, social and demographic circumstances and for developing sound policies and programmes aimed at fostering the welfare of a country and its population.*
- *The population census provides indispensable data for the scientific research, analysis and appraisal of the composition, distribution and past and prospective growth of the population, particularly in population estimates*

Uses of population censuses (cont.)

- *Uses for business, industry and labour : Reliable estimates of consumer demand for an ever -expanding variety of goods and services depend on accurate information on the size of the population in subnational areas and its distribution at least by sex and age*
- *Uses for boundary delimitation: One of the basic administrative uses of census data is to support political and administrative mapping. Detailed information on the geographic distribution of the population is indispensable*
- *Use as a sampling frame for surveys*

Uses of housing censuses

- For development of benchmark housing statistics
- for the formulation of housing policy and programme
- for transport solutions
- for assessment of quality of housing

11. Conclusion and recommendations

- *The release of data and census products needs to be determined and publicized well in advance of the census itself. This allows users to plan their activities related to the use of census statistics accordingly and appropriately.*
- *development of dissemination strategies should be an integral part of the overall planning process for the census.*
- *Consult with various stakeholders and identify specific needs for data, in order to develop appropriate products and related forms for their dissemination.*
- *It is recommended to diversify the means of dissemination, taking advantage of existing innovations as well as new information and communication technologies (e.g. GIS, interactive websites, social media networks) to enhance the dissemination process and census products to reach a wider audience, including the media and general public.*

Conclusion and recommendations (cont.)

- *Enhancing statistical literacy of the general public, media and potential users is considered crucial for successful dissemination of census results.*
- *Statistical awareness and educational programs on the ways to access, interpret and use census information might be needed for effective outreach*
- *Partnerships with the media are necessary in order to improve the wider dissemination and understanding of statistical information from censuses*

Conclusion and recommendations (cont.)

- *The development of a geospatial data warehouses is a prerequisite for creation of geographic information systems and a basis for spatial analysis which is an emerging trend in the presentation and visualization of census information*
- *It is important for census offices to consult data users in order to identify their needs for the type and format of census products to be produced. This is to ensure that census products are relevant, responsive and add value to the current policy questions and stakeholders' needs.*
- *Principles and Recommendations for Population and Housing Censuses, Revision 3, para. 3. 247.*

Conclusion and recommendations (cont.)

- A key decision about the quality of census results will be the trade-off between timeliness and quality. This is particularly important in designing the output strategy . Quality thresholds should be explained to users in conjunction with the issue of timeliness.
- The effectiveness of the census products phase must be objectively evaluated. The analysis of the information should be used to adjust the program as required. Key areas to be monitored depend on the specific project or activity
- Documentation : The census project management should plan for and implement a knowledge management system to assemble complete records on plans, activities, and decisions taken during the entire census operation.

Thank you

A faint, light-colored floral pattern is visible in the background, featuring several large, stylized flowers with multiple petals and long stems, set against a light gray, textured background.
