

الديوان الوطني للإحصائيات National Office of Statistics

Use of New Technology in data collection for general census of population and housing in Algeria RGPH2018

Mme Amal Lakehal, ONS, Algeria

22-23 January 2017, Cairo, Egypte

Summary

1. Introduction
2. Main phases of RGPH 2018
3. Field Work organization
4. Use of technology for data collection (03 dimensions to explore)
5. Implementation of data collection solution
 - ▶ Enumerator Application
 - ▶ Controller Application
 - ▶ Daily monitoring Application
 - ▶ Practical implementation
6. Estimation of the volume of the information flow
7. Challenges and constraints

Introduction

- ▶ **Algeria is preparing to realize his sixth population and housing census, after those realized in 1966,1977,1987,1998 and 2008.**
- ▶ **The country covers an area of almost 2382 000 km² (ranked 10th in the world), and a volume of population estimated at 42.5 millions in 2018.**
- ▶ **Administratively, the territory is divided into 48 wilaya (departments) and 1541 municipalities .**
- ▶ **New approach in 2018 Census : use of tablets in data collection**

Main phases of Algerian census

Preparatory phase: cartographic preparatory work ,
preparation of data collection documentation,
questionnaires, training, test census,.....

Execution phase : data collection .
(50 000 enumerators during two weeks)

Data exploitation and dissemination

phase :

Processing data

Preliminary results

Final results

Main phases of Algerian census

Preparatory phase

Cartographic preparatory work . (18 months)

Objective : division of national territory to enumerators area.

- Phase 1: cartographic up date .
- Phase 2: Division into EA.
- Phase 3: Building's numeration in the field
- Phase 4: preparing EA notebook.

- 2600 municipal delegate
- 61 ide wilaya engineer ,
- 200 supervisor of NSO .

Other tasks .

Design and methodology

Training:

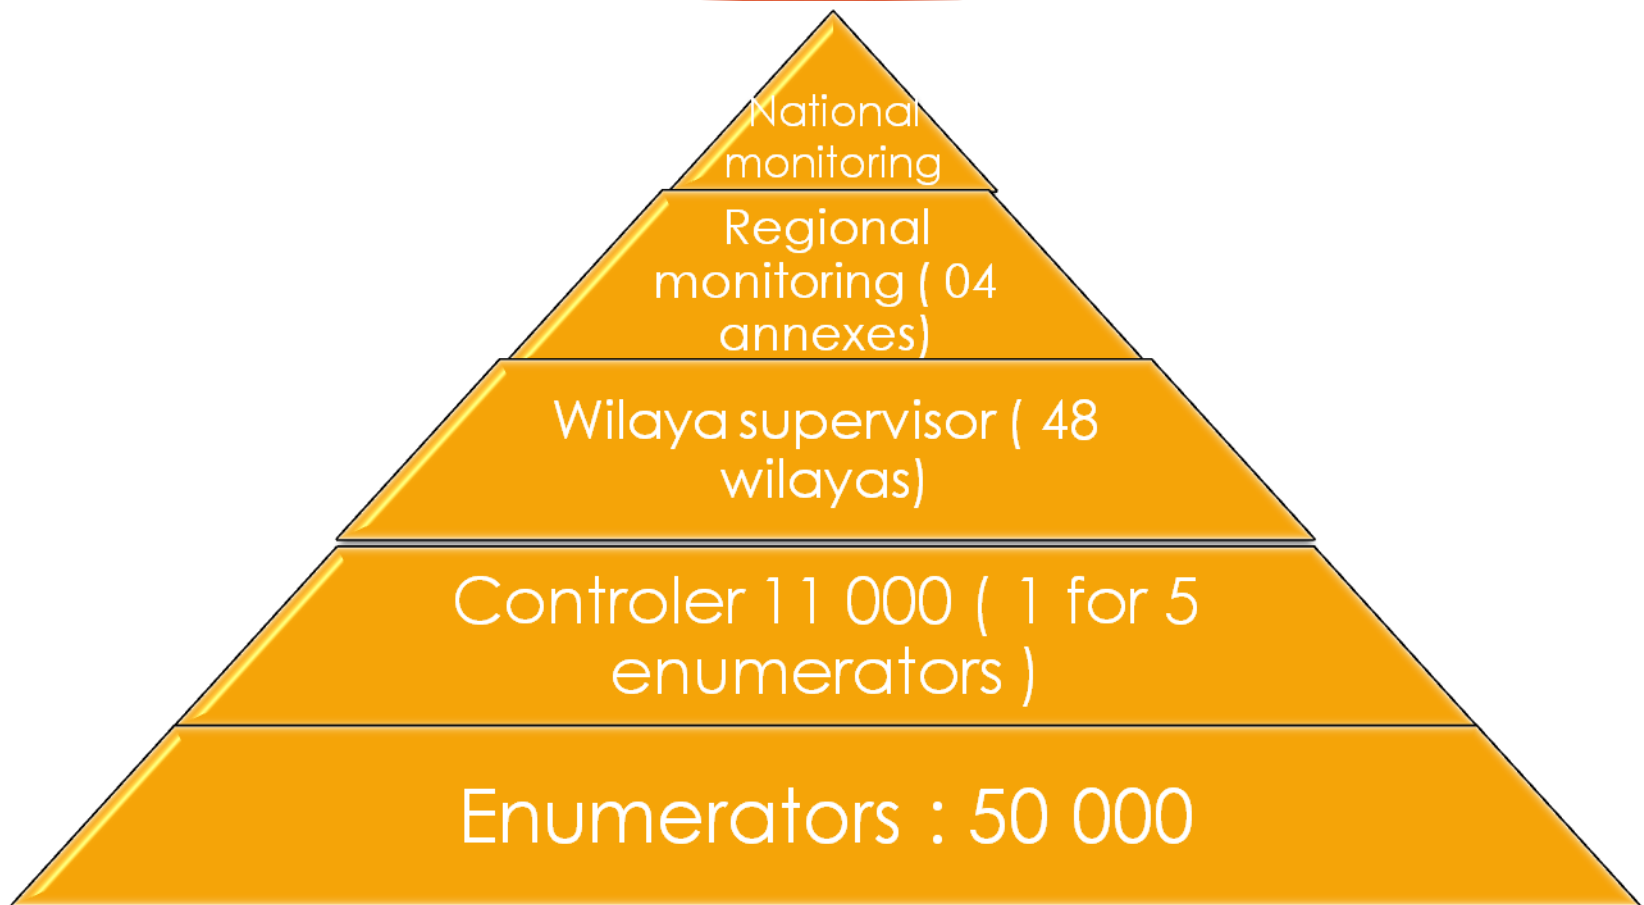

- Cartography,
- Municipal delegates
- Trainers.

Test Census

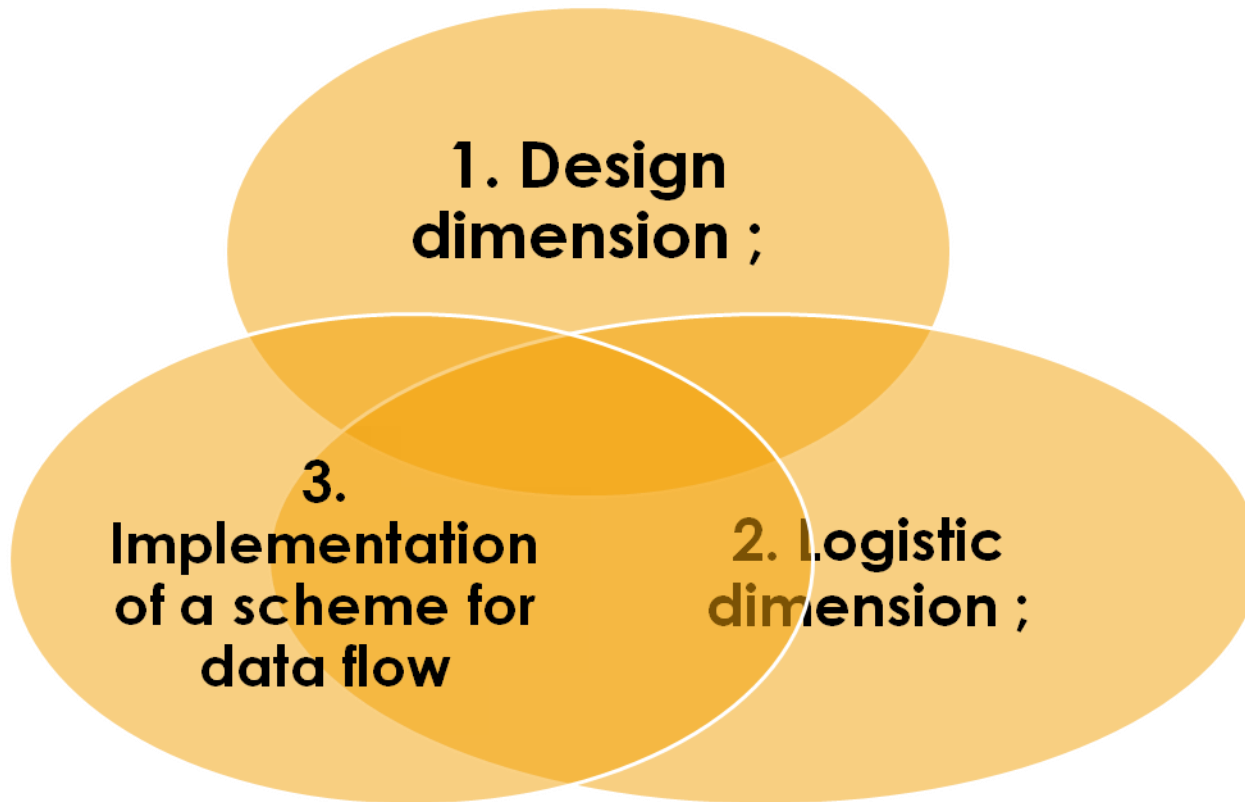

Design and implementation of software and hardware for data collection

Monitoring

Field Work Organisation

Use of technology for data collection (03 dimensions to explore)

Use of technology for data collection

- ▶ **Design dimension ; implementation of a software adapted for mobile technology use in data collection . Adopt a package of programs that ensure data entry, verification of data quality and ensure monitoring for census data collection at different levels of control (in the field, at regional and national level).**

Use of technology for data collection

Logistic dimension ; Acquire a hard platform with appropriate equipments in the NSO to ensure data collection process ;

- ▶ ***data center,***
- ▶ ***Specialized connection,***
- ▶ ***Design a Data transmission scheme***

Use of technology for data collection

- ▶ **Design a Data transmission scheme: taking into account the use of a secure national cloud during data collection and other technics for data storage before validation, encryption and data security....**

Data collection software

A supervision program for supervisors that verify daily performance, daily report, regional report, data quality indicators,

A control and validation data program for controllers that verify field work for 05 enumerators per controller

A Data entry program for enumerators with appropriate controls and logic rules.

Implementation of Data collection software

Equipment used for data collection

1. Enumerator

Enumerators will have a PDA for data entry, a Notebook in paper format that resume all building in the EA and a sketch map of his EA that he must visit it

2. Controller

Will have a Notebook more bigger for a complete overview of questionnaires . Every controller must verify data and performance of 5 enumerators

Implementation of Data collection software Enumerator Program

Connected to program with cell phone
using 3G and a personal login

Data entry for a new questionnaire ,
complete or correct a preview one . Only
enumerator can modify data collected

Questionnaire will be put in a state of
validation

Implementation of Data collection software Enumerator Program (at the end of the interview)

In case the 3G is available : a direct secured transfer to Data base located in the regional data center

Encrypted asynchrony backup on tablets SD card is established in a transfer queue that will be done automatically

If the interview is not complete , partial saving is possible and recorded on data base

Implementation of Data collection software Controller Program

Access to his application by entering his
login

Read and verify questionnaires

If the questionnaire is complete and
coherent it will be considered (by the
app)as “validate questionnaire”, if else it
will be “On waiting validation”

Implementation of Data collection software

Supervisor program

At department levels: regional and national level

**Daily reports progress of data
collection field**

**Elaborate quality and
monitoring indicator at
required level of
aggregation**

Implementation of Data collection software :

Practical implementation

NSO

- Design of the IT solution architecture
- Monitoring of works
- Ensure the adaptation with difficulties of fieldwork
- Set up the necessary infrastructures and equipment

Mobile phone operator

- Engineering of different programs and software
- Accompaniment during all stages of process
- Training sessions for NSO staff
- Transfer of technology to NSO staff

National committee

- Ensure inter sectorial coordination related to the use of ICT :
Ministry of posts and telecommunications,
l'ARPT (regulation agency of posts and telecommunications)
- Ministry of interior and local collectivities network
....

Challenges and constraints

- Training of staff at all levels
- Take account of linguistic aspects in Data Entry application
- Take account to reserve sufficient time for testing all applications and programs
- Need of fast intervention for technical problems during field work (two week of data collection)
- Data security
- Need of sufficient number of IT coordinators during data collection (bridging the deficit through other partners or institutions)
- Using paper questionnaires (20% of total need) in case of technical problems in tablets or internet connection
